

Webshopworks Fisheye widget for Magento

Installation

1. Unzip the zip file what you receive
2. Upload the files to the right folders

Help for the uploading:

After unzip, go into fisheye folder. There will be 2 directories 'app' and 'skin'.

Skin folder:

If you use the default/default theme just upload it to your Magento root.

If not

- Go into skin/frontend and here you can rename the package and design folder name.

App folder:

If you use the default/default theme just upload it to your Magento root.

If not

- Go into app/design/frontend and here you can rename the package and design folder name.

How to use widgets in Magento

Here is a good video from magentocommerce.com, which fully explains the widgets and how to use it: <http://www.viddler.com/explore/varien/videos/41/>
